Notice to All Somervell County Water District Customers

April 23, 2026

Somervell County Water District (SCWD) has completed all treatment plant improvements necessary to remediate our past Trihalomethane (TTHM) and Haloacetic Acid (HAA5) issues.

Preliminary testing indicates that all water currently being produced by the SCWD treatment plant is in compliance with TCEQ and U.S. EPA monitoring standards. It will be necessary for two or three more quarterly tests to be performed before our locational running annual average drops back down into compliance as well. Notices are required until the annual average reaches the compliance level.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Kevin Taylor', is written over the printed name.

**Kevin Taylor
General Manager
Somervell County Water District**

SOMERVELL COUNTY WATER DISTRICT

2099 CR 301 ▪ P. O. Box 1386 ▪ Glen Rose, Texas 76043

The Texas Commission on Environmental Quality (TCEQ) has notified the **SOMERVELL COUNTY WATER DISTRICT PWS 2130042** public water system that the drinking water being supplied to customers had exceeded the Maximum Contaminant Level (MCL) for total trihalomethanes. The U.S. Environmental Protection Agency (U.S. EPA) has established the MCL for total trihalomethanes to be 0.080 milligrams per liter (mg/L) based on a locational running annual average (LRAA) and has determined that it is a health concern at levels above the MCL. Analysis of drinking water in your community for total **trihalomethanes** indicates a compliance value in;

- 1Q2026 of 0.199 mg/L for 1171 CHEYENNE TRAIL, NEMO (DBP2-02)
- 1Q2026 of 0.155 mg/L for B PALUXY SUMMIT / OUTLAW STATION, GLENROSE (DBP2-01)

Trihalomethanes are a group of volatile organic compounds that are formed when chlorine, added to the water during the treatment process for disinfection, reacts with naturally-occurring organic matter in the water.

Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience problems with their liver, kidney, or central nervous systems, and may have an increased risk of getting cancer.

The Texas Commission on Environmental Quality (TCEQ) has notified the **SOMERVELL COUNTY WATER DISTRICT PWS 2130042** Public water system that the drinking water being supplied to customers had exceeded the Maximum Contaminant Level (MCL) for total haloacetic acids. The U.S. Environmental Protection Agency (U.S. EPA) has established the MCL for total haloacetic acids to be 0.060 milligrams per liter (mg/L) based on a locational running annual average (LRAA) and has determined that it is a health concern at levels above the MCL. Analysis of drinking water in your community for total **haloacetic acids** indicates a compliance value for:

- 1Q2026 of 0.070 mg/L for 1171 CHEYENNE TRAIL, NEMO (DBP2-02)

Haloacetic acids are a group of volatile organic compounds that are formed when chlorine, added to the water during the treatment process for disinfection, reacts with naturally-occurring organic matter in the water.

Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

You do not need to use an alternative water supply. However, if you have health concerns, you may want to talk to your doctor to get more information about how this may affect you.

We are taking the following actions to address these TTHM/HAA5 issues:

The District hired the Engineer firm of Enprotec/Hibbs& Todd (EHT) to help the District resolve the issue and selected BAR Constructors of Lancaster Texas as General Contractor to perform the improvements. TTHM/HAA5 remediation equipment has been in operation for several weeks now. Preliminary testing indicates that all water currently being produced by the SCWD treatment plant is in compliance with TCEQ and U.S. EPA monitoring standards. It will be necessary for two or three more quarterly tests to be performed before our locational running annual average drops back down into compliance as well. Notices are required until the annual average reaches the compliance level.

Please share this information with all people who drink this water, especially those who may not have received this notice directly (i.e., people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.

For further information, please see the other side or if you have questions regarding this matter, you may contact Kevin Taylor at 254-897-4141
